

A.

1. What problem does your product website solve or address?

My product website showcases general information about the product and how to use it, guides/ideas, reviews, and FAQ.

2. What is your product idea? How does your website support this idea and help solve the problem?

My product idea is a site/app that allows users to organize their student lives and schedules in a simple, accessible, and customizable way.

3. What type of website are you building? (i.e., e-commerce, brochure, portfolio, media, nonprofit, etc.)

This website is primarily informational to showcase my product.

4. What is your mission statement? Summarize what your product does, who it's for, and why it matters.

My product is made to help students better organize their lives and both short-term and long-term objectives. It will be a place that is simple to navigate and learn while also being highly customizable to fit user preferences.

B.

1. Who is the primary audience that your product is trying to reach?

Demographics:

- **What is the age range of your target audience?**

Most likely around 15-24 but students can vary in age.

- **What is the gender distribution?**

Probably split evenly

- **Which country do your visitors live in?**

Any country but based mostly on American student lives so probably the USA

- **Do they live in urban or rural areas?**

Could be anywhere with a school

Socioeconomic Details:

- **What is the average income of visitors?**

Probably on the lower end as they are students

- **What level of education do they have?**
Most probably don't have a college degree but might have high school (I also include high schoolers as target audience);
- **What is their marital or family status?**
Probably not married and doesn't have a family but its possible
- **What is their occupation?**
Student and potentially part-time work
- **How many hours do they work per week?**
Not including studying probably less than 25 hours per week

Web Behavior:

- **How often do they use the web?**
Definitely daily
- **What kind of device do they use to access the web?**
Laptops, Desktops, phones, and tablets

2. **Create a chart with at least three fictional visitors from your target audience. This chart should include at least their name, sex, age, location, occupation, income and web use. You can create this chart manually or with AI tools like ChatGPT.**

Using ChatGPT:

Name	Sex	Age	Location	Occupation	Income	Web Use
Alex Martinez	Male	17	Providence , Rhode Island	High school student; part-time grocery store employee	~\$8,000/year	Uses the web daily, mostly on a phone and school laptop
Maya Thompson	Female	20	Boston, Massachusetts	Full-time college student	~\$5,000/year from part-time/on-campus work	Uses the web several hours daily on a laptop and phone

Jordan Lee	Male	22	Austin, Texas	College student; part-time restaurant employee	~\$16,000/year	Uses the web daily on a laptop, phone, and occasionally a tablet
Sofia Williams	Female	16	Orlando, Florida	High school student	No personal income	Uses the web daily, primarily on a phone and Chromebook

3. Create a list of reasons why people would be coming to your site and assign the list of tasks to the fictional visitors you created. You can complete this step manually or with AI tools like ChatGPT.

Using ChatGPT:

Reasons people would visit the site

Students would come to the website to organize their academic and personal lives. Some of the main tasks they might want to complete include:

1. Add and keep track of homework assignments.
2. Record upcoming tests, quizzes, and exams.
3. Keep track of assignment and project deadlines.
4. Create a daily or weekly schedule.
5. Schedule study sessions.
6. Keep track of school events and extracurricular activities.
7. Balance school responsibilities with a part-time job.
8. Set reminders for important deadlines and events.
9. Check what tasks need to be completed that day.
10. Plan ahead for busy school weeks.

Tasks assigned to fictional visitors

Visitor

Reasons for visiting / Tasks

Alex Martinez, 17 Add homework assignments, check upcoming tests, organize his school schedule around his grocery store shifts, and set reminders for deadlines.

Maya Thompson, 20 Keep track of college assignments and exams, schedule study sessions, organize social and school events, and plan her week.

Jordan Lee, 22 Manage large college projects, keep track of deadlines, balance restaurant shifts with classes, and check his daily task list.

Sofia Williams, 16 Record homework, track quizzes and tests, organize extracurricular activities, and check what schoolwork she needs to complete each day.

A. Website Requirements

1. Purpose and Goals

- What is the primary goal of your website (i.e., promote a service, sell a product, educate users, raise awareness, etc.)?

The primary goal is to both promote a service (my product) and educate potential users on it

- What is the most important action you want users to take on your site (i.e., sign up, purchase, read articles, submit a form, etc.)?

Sign up and launch the product is probably the most important but there will also be a lot of product information that I want them to read

2. Content and Features

- What content and features are essential to help users achieve their goals? List critical pages and features (i.e., About, Contact Form, Product Gallery, FAQs, Reviews, etc.)

About, informational pages, product gallery/examples, FAQs, sign-up, and reviews would all be important features

- What will your homepage highlight? Think about the first impression and what visitors need to see right away.

It will open up with an enticing design and a clear sense of direction so the user feels excited to explore but not overwhelmed

3. Look and Feel

- Do you have examples of websites that inspire your design? List 1–2 examples and what you like about them (i.e., layout, colors, interactivity, etc.).

An example I chose is:

https://cowboy.com/?srsId=AU7gw4XPm1p2d_YOy4DZZVebO75nAz5YX3kB7yZVVliDt_uPbGMEx0qi

I really like how you already know where everything is once it opens, but scrolling down will allow you to see images and info of the product. I think the video right at the beginning is very effective as well.

- How would you describe the overall style of your site (i.e., modern, bold, minimalist, playful, professional, etc.)?

I want it to be very sleek and simple while also being very fun to explore and look at.

- Do you have preferences for color, fonts, or imagery? If not, what mood or personality do you want the site to convey?

I'm not sure I have the colors down yet but I want this site to inspire users to be creative.

B. Design and Prototyping

1. SDLC Approach & Timeline

- I've chosen Agile
- Timeline (Based on course learning goals)
 - Week 3 (Now): Have plan and design ready
 - Week 6: Have HTML & CSS ready
 - Week 9: Gather feedback and have redesign ready
 - Week 12: Have backend ready

2. Accessibility

- I will make sure the font is big enough and colors contrasting enough to be considered accessible
- I don't plan on having voices so subtitles aren't an issue
- Short description on images for screen readers
